Art Unit: 1653

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 35-44, drawn to a method of treating bacterial infection and intestinal infection in a patient, are classified in class 530, subclass 390.1, class 514, subclass 8, class 435, subclass 106, and class 604, subclass 19.

II. Claims 45-49, drawn to a method of reducing oxidative stress due to acute intestinal inflammation, are classified in class 530, subclass 390.1 and 395, class 514, subclass 8, class 435, subclass 7.32, class 435, subclass 106, and class 604, subclass 19.

Claims 1-26 and 28-34 link inventions I, II and III. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claims 1-26 and 28-34. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/ are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as different and/or distinct methods, a method of altering and increasing the synthesis of mucin, reducing acute intestinal inflammation mediated oxidative

Art Unit: 1653

stress due to enhanced mucin level *in vivo* and treating intestinal inflammation in a patient, a method of maintaining mucin glycoprotein synthesis in a patient, and a method of treating intestinal bacterial infection in a patient. These methods differ with respect to ingredients, method steps, outcome of carrying out the each process; therefore, each method is patentably distinct since the practice of any one invention would not have resulted in the practice of the other indicated inventions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art shown by their different classification, art recognized divergent subject matter, separate search, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
